WOMEN'S COLLECTION

**PPE CLOTHING FOR WOMEN
DESIGNED BY WOMEN**

TRUST THE ARC FLASH SPECIALISTS
WWW.PROGARM.COM

FEMALE FITS

WE BELIEVE EVERYONE DESERVES PPE THAT FITS

For too long, women in industries like utilities, construction, and power generation have had to make do with kit designed for men.

Not only is that uncomfortable, but it can also put them at greater risk. We've changed that.

What makes our approach different is that our women's range is designed by female designers who know first-hand what matters. They think about the details, like how garments move with the body, where protection panels sit, and how to balance safety with comfort. That's why our range is one of the most inclusive out there, from coveralls and trousers to base layers and even the world's first Arc Flash bra.

By offering inclusive fits across a wide variety of sizes and lengths, ProGARM® helps businesses protect every member of their workforce equally.

Chantelle
National Gas Transmission

// For 8 years, I wore men's PPE, which meant when ordering the right chest size, the sleeves and legs were too long, or the crotch sat far too low. After trialling ProGARM women's PPE, the difference was remarkable. A perfect fit, lighter fabric and much more comfort and freedom to move. //

DESIGNING GARMENTS WORKERS ACTUALLY WANT TO WEAR

▮▮ VITALLY, THE PROGARM® DESIGN TEAM HAS FEMALES DESIGNING THE GARMENTS FOR FEMALE WEARERS. ▮▮

This means that our designers understand the nuances that exist between menswear and what is needed in women's wear to make it fit correctly. They are able to design not just protective garments, but to translate these protective garments into fits that empower the female wearers, giving them protection that allow them to perform to their best ability, safely, while looking smart.

"Our key focus is ensuring that we design and manufacture Arc Flash PPE garments that workers actually want to wear. This way we minimise the risk of garments being cast off or not worn correctly which leaves the person exposed to life-threatening, possibly even life-ending injury." Says a Product Developer at ProGARM®. "When it comes to developing PPE for female workers, it isn't enough just to shrink male garments into a smaller size. When we are designing our women's garments we look at the different body proportions such as chest, waist, and hips and design around their longer torso. We also look at the smaller details such as the wider range of motion of female joints such as elbows and shoulders to make sure protection is placed correctly and garments aren't restrictive."

It is not just outerwear that ProGARM® have committed to creating in gender variant fits. Base layers are critical to Arc Flash protection. Although non-melting clothing (such as cotton, wool, silk, and leather) may sometimes be allowed as a layer under an outer arc-rated protected garment, this type of clothing offers no protection against ignition and could cause serious burns in a fire or arc flash incident. And so, the ProGARM team has created a wide range of male and female base layers including an Arc Flash bra, an often unthought-of item, that in an incident could cause serious injury.

Just like our men's garments, the ProGARM® women's range is made from our latest VXS+ fabrics, and manufactured and tested for minimal shrinkage and low colour washout. And because the Arc Flash protection is 100% inherent to the garment, the instant extinguishing Arc Flash protection won't wash out either. This means that the garments have inherent protection for their full life cycle. ProGARM® female garments not only look and fit great, but also give peace of mind that comes with knowing you are protected too.

As the innovators in PPE, ProGARM® are committed to staying one step ahead of industry requirements and continue to review their product ranges to be as inclusive as possible by never compromising the comfort of the wearer.

Tall	176-188cm	5'9"-6'2"	80cm	31½"

MEASURING GUIDE

Measurements must be taken wearing clothing usually worn underneath waterproof outerwear. The tape measure should be fairly loose and not pulled too tight.

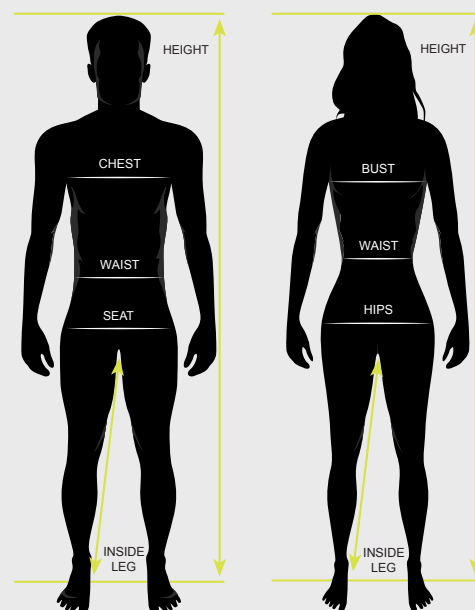

- ✓ **CHEST/BUST** - measure under the arms at the fullest part around the chest horizontally with arms by your side
- ✓ **WAIST** - measure around the natural waistline at the fullest part
- ✓ **SEAT/HIP** - with the feet together measure around fullest part of the hips
- ✓ **HEIGHT** - with bare feet together measure from the top of the head to the floor
- ✓ **INSIDE LEG** - in bare feet take the measurement from the top of the inside leg and measure down the inside leg to the floor

Once measurements are taken compare them to the fit guide measurement tables to find your garment size.

When fitting the trouser if the waist and seat measurements fall into different size categories then choose the larger size to ensure the trouser is not too close fitting.

If the height and inside leg measurements fall into different length categories then choose the jacket length based on the height measurement and the trouser length based on the inside leg measurement.

Please note when using the measurement tables that all manufacturing tolerances and standard garment over-measures have been taken into account. This ensures any slight variances in manufacture or fabric shrinkage after washing will not affect the fit of the garments.
